Year 1: Seasonal Changes Learning Organiser

Subject Specific Vocabulary		Seasons and Weather
Season	There are four seasons in a year: spring, summer, autumn and winter	The four seasons occur in a cycle throughout the whole year. We notice the change in seasons because the weather around us starts to change. The plants and animals also come out at different times of the year and lots of animals hibernate in the winter, because it is too cold for them to be outside.  Spring	This is when the flowers start to come out and is between the months March, April and May	
Summer	This is the hottest time of the year, when there is lots of sunshine. It is between June, July and August	 Rain: this is when it is very wet and we need to take an umbrella with us.  Sunshine: this is when the sun comes out and it is warm. If there is lots of sun it can feel very hot!  Windy weather: this is when the wind blows and it can feel cold. Sometimes if it is very wind, our belongings can fly away!
Winter	This is the coldest time of the year when there is often ice and sometimes snow. It is between December, January and February	
Autumn	This is when the leaves start to turn golden and the weather starts to get cooler. It is between September, October and November,	A rainbow happens when it is both raining and sunny at the same time!  **<u>Science Skill: Observation</u>** Observation means to use our eyes and watch things carefully to see if they change in any way. 
Weather	This changes everyday and is what we see around us
