Year 1: Plants Learning Organiser

Subject Specific Vocabulary

leaves	his is the part of the plant that absorbs sunlight and changes colour depending on the seasons.	**bulb**	This is what new plants grow from.
flower	Flowers are colourful parts of the plants and attract insects to the plant.	**seed**	This is how plants spread so that they can grow in different places.
blossom	This is when there are lots of flowers on a tree or a bush.	**trunk**	This is the base of a tree.
petal	Petals are the colourful part of the flowers	**branch**	These grow from the trunk of a tree.
fruit	Fruits contain the seeds of the plants. Sometimes humans try to grow fruit, without seeds because it is easier to eat.	**stem**	This is what gold the plant upright and carries water to the leaves and flowers.
root	This is where plants absorb water and nutrients from the soil.	**vegetable**	Part of a plant that can be eaten like a potato.

Different types of plants

Wild Plants

Wild plants are ones which only grow in certain habitats, like forests or woods.

Garden Plants

Garden plants are everyday plants that we can see in parks or our back garden.

Trees

Trees start off as a small seed and can take many years to grow to their full height. They are really important for the planet because they allow humans to breathe.
