Year 5: We are Artists

Gorringe Park Primary School

Subject Specific Vocabulary

Geometric – a pattern made with shapes.

Landscape – an area of land created as artwork.

Op art (optical art) – a type of art that uses optical illusions.

Sprite – the 'actors' in a program. These are what move when you code them to.

Symmetry – identical parts opposite each other.

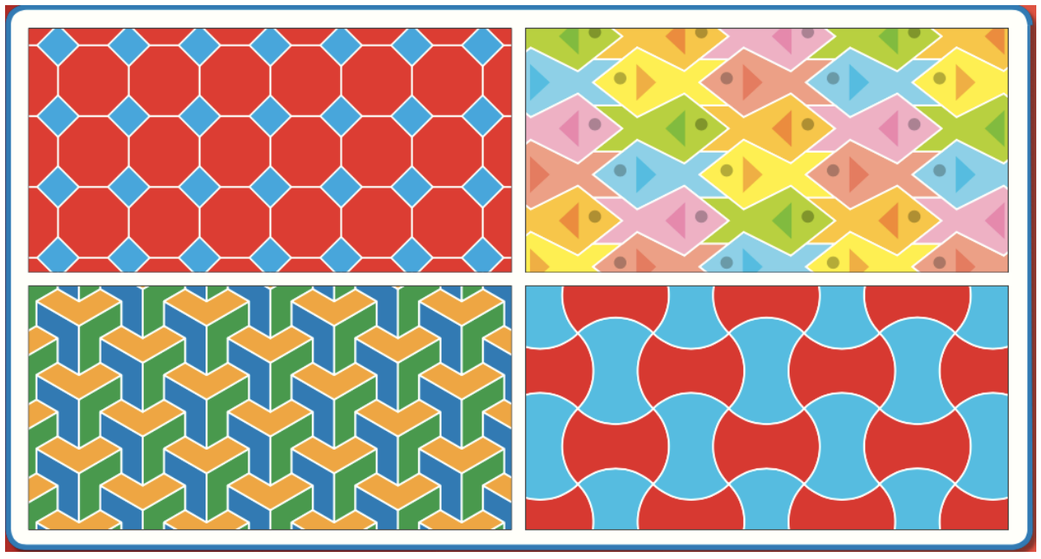

E-safety

- When researching art online, it is important to think carefully about the quality of online content and the source it comes from.
- If you upload your art online, ensure your ownership of it is evident to prevent others claiming and using it as their own.

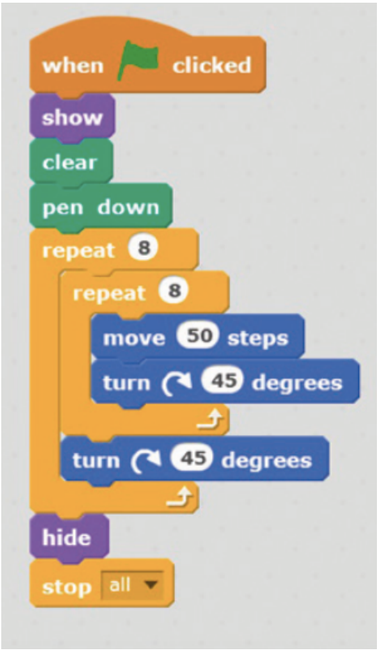

Key Learning Points

- I can make meaningful links between the use of technology and art.
- I can explore the tools and techniques needed to create vector art through coding a sprite.
- I can critique my own and others artwork, suggesting improvements based within code.
- I can use sequences to create inputs and outputs.
- I can use logical reasoning to explain how simple algorithms work and detect errors within these.

Knowledge check

To create your own artwork, you will create a script for the sprite to move and draw as it moves. You will code in, using these blocks, the steps it will take and how far it moves.

Telling it to put the pen down will tell the sprite to draw as it moves.
